Workshop Section

Content Policy & Resource Evaluation Guide

Version	1.0
Status	Active
Author	Craig (CAG07)
Project	RoleVerse — AI-Powered TTRPG Companion
License	AGPL-3.0
Scope	Governs all content linked to or featured in the Workshop section

1. Purpose

This document defines what the RoleVerse Workshop section is, what it may contain, how resources are evaluated before inclusion, and how affiliate and commercial relationships are disclosed. It exists to protect the integrity of the project, respect intellectual property, and establish a repeatable standard as the Workshop grows.

The Workshop is a curated resource hub — a DM's reference shelf, not a content host. It directs users to external resources rather than reproducing them. This distinction is the legal and ethical foundation of everything in this policy.

2. What the Workshop Is

The Workshop serves as a launchpad to trusted external resources across all game systems supported by RoleVerse. It is organized by category rather than by game system, with system filters applied at the UI level. Its purpose is to help users find rules references, world-building tools, VTT resources, publisher storefronts, map assets, and community spaces — all in one place.

The Workshop does not host, embed, or reproduce third-party content. All value it provides comes from curation, organization, and the context RoleVerse adds around external links.

3. Content Categories

Each category below describes what belongs in it, what does not, and the legal basis for inclusion.

3.1 Reference SRDs & Open Rules

Open-license rules documents that publishers have explicitly released for community use. These are the safest category and the primary rules reference layer for the app's supported game systems.

- OSRIC (Old School Reference and Index Compilation) — AD&D 1E & 2E compatible, published under OGL. Freely linkable; excerpts permitted under the license terms.
- Basic Fantasy RPG — OGL, freely distributed, openly welcomes community use.
- Old School Essentials SRD — OGL, B/X compatible.
- D&D 5E System Reference Document (2014) — published under OGL by Wizards of the Coast.
- Pathfinder 1E & 2E SRDs — published by Paizo under OGL and Community Use Policy.
- Dungeon Crawl Classics SRD — Goodman Games, OGL.

Do not include: any TSR-era content (AD&D 1E/2E core books, modules, supplements) regardless of personal ownership. WotC holds these copyrights and enforces them. Linking to a publisher's official sale page for these materials is acceptable; reproducing or hosting any portion is not.

3.2 World-Building Tools

External applications and services that assist with campaign and world management. Links only — no embedding of third-party UI or content.

- Kanka.io — campaign wiki, NPC management, world-building. RoleVerse has API integration planned; Workshop links to the Kanka homepage and documentation.
- Worldanvil — world-building platform with strong TTRPG community.
- Notion TTRPG templates — community-created, freely shared. Link to template galleries only.
- Obsidian MD with TTRPG plugins — link to official plugin pages.

3.3 VTT Resources

Fantasy Grounds is the primary VTT integration for RoleVerse. This category prioritizes FG-specific resources, with secondary coverage of other VTTs users may run alongside the app.

- Fantasy Grounds Unity — Smiteworks official site, FG Forge (module marketplace), FG Wiki, FG forums. Smiteworks is considered a cooperative partner given RoleVerse's direct FG integration.
- FG community Discord and subreddit — link to official community spaces.
- Roll20, Foundry VTT, Owlbear Rodeo — secondary coverage for users running hybrid setups.

FG marketplace links may be affiliate links where the Smiteworks affiliate program permits. See Section 5.

3.4 Publisher Storefronts

One entry per supported game system pointing to the official publisher's primary sales channel. These are referral links that benefit both the publisher and potentially RoleVerse through affiliate programs.

- AD&D 1E & 2E — WotC/D&D Beyond or DriveThruRPG for legacy reprints. Link to official sale pages only.
- D&D 5E (2014 & 2024) — D&D Beyond official storefront.
- Pathfinder 1E & 2E — Paizo.com.
- Dungeon Crawl Classics — Goodman Games official store.
- The One Ring 1E & 2E — Free League Publishing.
- Cyberpunk 2020 — R. Talsorian Games.
- DriveThruRPG — general TTRPG storefront covering most systems. Affiliate program available.

Do not link to grey-market or unofficial digital archives for any copyrighted material, including PDF sharing sites, even if those PDFs are freely found online.

3.5 Maps, Art & Generators

Creative assets with explicit open licenses suitable for use in TTRPG campaigns.

- Dyson Logos — prolific dungeon cartographer, CC-licensed maps freely available.
- One Page Dungeon compendium — annual community collection, CC-licensed.

- Donjon — random generators (dungeons, NPCs, names, calendars). Free to use.
- Inkarnate — map creation tool, link to official site.
- Unsplash / Pixabay — CC0 photography for scene inspiration.

Do not feature art or maps without a clearly stated open license. Fan art of trademarked characters or settings should not be featured even if the individual artist has posted it publicly.

3.6 Community Spaces

Official forums, Discord servers, and subreddits for the game systems and tools RoleVerse supports. Links only.

- OSR subreddit and Discord communities.
- Paizo forums.
- Goodman Games forums.
- RPG.net — general TTRPG discussion.
- System-specific subreddits (r/DnD, r/Pathfinder_RPG, r/osr, etc.).

4. Resource Evaluation Checklist

Every resource added to the Workshop — whether by the maintainer or submitted by a user — must pass the following checklist before inclusion. This applies equally during personal use and if the project becomes commercial or donation-supported.

Criterion	Pass	Fail	Notes
Is linking to this resource legal?	Yes — linking is universally legal	Resource itself hosts illegal content	<i>Legality of the destination matters</i>
Is the resource official or clearly licensed?	Official site, OGL, CC, or explicit publisher permission	Unofficial, grey-market, or unclear license	<i>When in doubt, exclude</i>
Does RoleVerse reproduce any content from it?	No reproduction — links only, with original	Any copying of text, tables, or images	<i>Description must be in our own words</i>

Criterion	Pass	Fail	Notes
	descriptive text	from the source	
Is the resource actively maintained?	Updated within 2 years or is a stable permanent reference	Abandoned, broken links, or deprecated	<i>Review annually</i>
Is there a commercial or affiliate relationship?	Disclosed clearly per Section 5	Undisclosed commercial relationship	<i>Non-negotiable disclosure requirement</i>
Is the resource relevant to a supported game system?	Directly relevant to a system in the app's supported list	Unrelated to any supported system	<i>Use system filter tags</i>
Would a reasonable user trust this resource?	Official publisher, known community institution, or vetted creator	Anonymous, unverified, or reputation concerns	<i>Integrity standard applies</i>
Is the resource free of hate, harassment, or harmful content?	Clean community standards	Any harmful content at destination	<i>Zero tolerance</i>

5. Affiliate & Commercial Disclosure

RoleVerse may participate in affiliate programs including but not limited to DriveThruRPG, Smiteworks/Fantasy Grounds, and Amazon. Affiliate links generate a small commission when users make purchases after clicking — at no additional cost to the user.

Required disclosure language

The following notice must appear in the Workshop section of the application, visible without scrolling:

"Some links in the Workshop may be affiliate links. RoleVerse may earn a small commission if you make a purchase through them, at no extra cost to you. Affiliate relationships do not

influence which resources are featured — all inclusions are evaluated against our content policy.”

This language must be present before any monetisation is active, including the donation phase, to establish the standard from the outset.

Business model alignment

The Workshop's affiliate layer is designed to complement rather than compete with the API credit model. Users buy credits to power the AI agents; the Workshop earns through referrals when users discover and purchase external resources. These are separate value exchanges and should never be conflated in UI or communications.

6. User-Submitted Resources

If the Workshop is opened to community submissions, the following process applies:

1. User submits a resource via the in-app submission form, providing: URL, category, game system tags, license type, and a brief description in their own words.
2. Submission is queued for maintainer review — not published immediately.
3. Maintainer applies the evaluation checklist in Section 4.
4. If approved, the resource is added with the submitter credited (optional, user's choice).
5. If declined, the submitter receives a brief reason (e.g., "unclear license", "not relevant to supported systems").

User submissions do not create any obligation to include the resource. The maintainer's evaluation decision is final. Submitting a resource does not grant the submitter any rights over how it is displayed or described.

7. Annual Review

The Workshop directory should be reviewed once per year, or when a major change occurs (new game system added, publisher changes license terms, affiliate program changes). The review covers:

- Check all links for validity and that destination content has not changed in character.
- Verify affiliate program terms remain consistent with the disclosure in Section 5.

- Add newly released SRDs or open-license resources for supported systems.
- Remove or update any resources that no longer pass the evaluation checklist.
- Update this document version number and review date.

8. Hard Limits — No Exceptions

The following are unconditional regardless of personal ownership, project phase, or user demand:

- No reproduction of TSR-era content (AD&D 1E/2E core books, supplements, modules, art).
- No hosting or embedding of PDFs, scanned pages, or image reproductions of copyrighted materials.
- No linking to grey-market archives or piracy-adjacent resources.
- No undisclosed affiliate or commercial relationships.
- No fan-made content without a clearly stated open license and the creator's knowledge of the feature.
- No content that promotes harassment, hate, or harm in any form.

Personal ownership of physical books, modules, or supplements does not grant redistribution rights of any kind. These limits apply equally at all stages of the project.

9. Document History

Version	Date	Summary
1.0	2026	Initial draft — categories, checklist, disclosure language, hard limits.
